## PowerBook 165: Description (8/93)

Article Created: 16 August 1993

TOPIC -----

This article describes the PowerBook 165.

DISCUSSION -----

The Apple PowerBook 165 is an all-in-one notebook computer. Featuring a 33 megahertz 68030 microprocessor, the PowerBook 165 supports up to 14 megabytes of RAM, so you can work with multiple applications simultaneously.

The PowerBook 165's 10-inch (254-millimeter) backlit passive-matrix display supports 16 levels of gray. You can connect the PowerBook 165 to any Apple color display (up to 16-inch) or some VGA/SVGA displays. In dual-display mode, you can display one image on the built-in screen and a different image or even another application on an external monitor at the same time.

The PowerBook 165 includes a standard-size keyboard, full-page-width display, built-in trackball, and seven built-in ports for access to peripheral devices. It fits in a briefcase and weighs just 6.8 pounds (3.03 kilograms).

AppleTalk networking is built into the PowerBook 165, so you can connect to an AppleTalk network, such as electronic mail, printers, and file servers. With an optional modem and AppleTalk Remote Access software, the PowerBook 165 can access AppleTalk networks practically anywhere in the world.

### PowerBook 165 Features

#### Power and speed

-----

- 33-MHz 68030 microprocessor

#### Memory

-----

- 4 MB of RAM, expandable to 14 MB

#### Display

-----

- Supertwist backlit passive matrix, 640 by 400 pixels
- Full-page-width, 10-in. (254 mm) diagonal; 16-level gray scale

- Adjustable brightness and contrast controls

#### Expansion
