## PowerBook Duo: Battery Charging Only Halfway (8/93)

Article Created: 11 August 1993

TOPIC -----

The battery on my PowerBook Duo 230 will no longer charge more than halfway.

I tried to hold in the power button (on the back) for 5 seconds. I did this two times, both with the unit off and with it asleep, and nothing changed.

DISCUSSION -----

The battery may not be getting fully seated when it is inserted. Make sure it is firmly locked into position.

Holding in the power button on the back resets the Power Manager chip, and may not affect a problem with the battery specifically. It is possible that the battery itself is bad. Take the unit to a dealer for service.
