PowerBook 3400: Battery Recondition Software (3/97)

Article Created: 10 March 1997

TOPIC -----

Why does the PowerBook 3400 ship with the Battery Recondition software when the Lithium Ion battery does not require reconditioning?

DISCUSSION -----

The Battery Recondition software is included because the PowerBook 3400 can use a PowerBook 5300 or 190 Nickel Metal Hydride battery, which does require occasional reconditioning.

When a customer tries to use the Battery Recondition software on a PowerBook 3400 containing a Lithium Ion battery, the customer will get a message stating that it is not necessary.
