PowerBook 500 series: Dual Speed Explained (8/94)

```
Article Created: 11 July 1994
Article Reviewed/Updated: 30 August 1994

TOPIC -------------------------------------------------------------

This article explains the Dual Speed rating for the processor used in the
PowerBook 500 series computers.

DISCUSSION --------------------------------------------------------

Traditionally, Apple has advertised the processor's bus clock speed as the speed
of the CPU. In the case of the PowerBook 500 series, this is 33Mhz. On the other
hand, the DOS world has advertised the processor clock speed, which is twice the
bus clock speed, for certain processors. As this is more of an industry
standard, we have begun to publicize the processor clock speed, in this case,
66Mhz.
