PowerBook PC Cards: Card Won't Show on Desktop (10/95)

Article Created: 23 October 1995

TOPIC ---

I recently purchased a Global Village PowerPort Platinum PC Card for my
PowerBook 5300 computer. It has been working fine for several days, but now it
does not show on my desktop when I insert it. I can still use it for fax or data
communication as if it is there.

DISCUSSION ---

The PC Card Extension must be loaded at startup in order for your PC Card to
appear on the desktop. You can still use your PC Card even though it does not
appear on the desktop but you will have to use the eject button next to the PC
slot to eject the card.

Verify that the PC Card extension is in the Extensions folder of your System
Folder and that it has not been disabled in the Extensions Manager control
panel. Restart your PowerBook. Your card should appear when the computer
completes its startup sequence.
