PowerBook Fax Sender: Configure Receiving Fax to Print Header

Article Created: 28 February 1992

TOPIC ---

The Fax/Data Modem for the PowerBooks doesn't allow the receive modem to date
stamp the top of the page as other fax machines do when they send faxes. After
testing it here I've come to the conclusion that this has to be something in the
software and not the fax itself that is dropping this date stamp from the top of
the page.

DISCUSSION --

Depending upon how a fax machine is configured:

- It can generate a header, which may include the date and time as a part
  of the fax image it sends, or

- Automatically print a header on the fax image it receives.

The PowerBook Fax Sender software doesn't include a header in the fax it
generates. It does however send its Station ID. It's the responsibility of the
receiving fax machine to shape and include it in the fax image it prints. The
receiving fax machine needs to be configured to do this.

So, if you have your fax machine configured to generate headers on sent faxes
but not on received ones, this would explain why you aren't seeing headers
printed on faxes received from PowerBooks.
