Password Security Control Panel (12/95)

Article Created: 2 December 1995

Article Reviewed/Updated: 8 December 1995

TOPIC -----

I want to use the Password Security control panel, which came on my new Macintosh Powerbook, on my desktop Macintosh too. Can I do this?

DISCUSSION -----

The Password Security control panel is part of the PowerBook System 7.5.2, and only works on a limited number of Powerbook computers. Here is a list of PowerBook computers the Password Security control panel currently works with.

- PowerBook 190 series
- PowerBook Duo 2300 series
- PowerBook 5300 series

The components of System 7.5.2 do not function on earlier Macintosh systems. However, many of the new technologies included in System 7.5.2 will be rolled into future operating system updates.
