Quadra 605: Playback Of 44KHz Sound Files

Article Created: 25 July 1994

TOPIC -----

Caller is using professional level audio applications and would like to know if sounds previously recorded as 16 bit 44khz samples on a Power Macintosh 6100 and a Quadra 660av will play back at the same resolution on a Quadra 605?

DISCUSSION -----

The Quadra 605 supports both recording and playback of sounds at 8-bit and sampling rates of 11 kHz or 22 kHz. There are several ways to playback 16-bit 44kHz files on a Quadra 605.

One solution is to install Sound Manager 3.0 on the Quadra 605. It will automatically convert 16-bit 44kHz files to 8 bit 22kHz files on the fly for playback. Another method is using QuickTime 2.0 to playback 16-bit 44kHz audio movie files. QuickTime 2.0 will automatically convert them to 8-bit playback on the Quadra 605.
