AV, 68040 Macintoshes: Remote Application Launch Crash (1/94)

Article Created: 19 January 1994

TOPIC --

Is there an incompatibility when launching applications or files
on an AV Series Macintosh from a remote volume? My Macintosh crashes
or hangs when doing so.

DISCUSSION ---

The problem has been reported by users of AV Series Macintosh models as
well as on other 68040 based Macintosh models which have had NSI (Network
Software Installer) 1.4 or 1.4.1 updates installed.

The Network Launch Fix (1.0) is a system extension that allows you to
successfully launch application programs over a network.

You should install the Network Launch Fix if you have a Macintosh computer
with a 68040 microprocessor. The 68040 microprocessor is included in
Macintosh Quadra, Centris, and Performa 470 series computers.
