Quadra 840AV & 660AV, System 7 Pro, and AIR 3.0 (11/93)

Article Created: 11 November 1993

TOPIC -----

Are there any compatibility issues for the Macintosh Quadra 840AV or Quadra 660AV computers, System 7 Pro, and Apple Internet Router 3.0?

DISCUSSION -----

System 7 Pro, the Macintosh Quadra 840AV or 660AV, and Apple Internet Router 3.0 are compatible with each other. The key is to install the software in the correct order. The problem here is the Apple Internet Router 3.0 installs a version of AppleTalk that is not compatible with System 7 Pro. The easiest way to solve the problem is to install the software in this order:

- 1) Install System 7 Pro
- 2) Install Apple Internet Router 3.0
- 3) Install NSI 1.4 or later

Step 3 insures that AppleTalk 58.1 or later is installed and this is what System 7 Pro requires.
