Macintosh Quadra 950: ROM Socket (12/95)

Article Created: 07 December 1995

TOPIC -----

The Macintosh Quadra 950 logic board has ROMs that are soldered to the board, but the logic board also has a ROM socket. Why is this. Should I have something in the ROM SIMM socket?

DISCUSSION -----

The ROM socket is available so that an updated set of ROMs could be added. Many Apple logic boards have an empty ROM socket for possible ROM updates. However, if the ROMs are already soldered to the board, you do not need anything in the ROM socket.
