Macintosh Quadra and PageMaker 4.0 & 4.01: Incompatible Filters

Article Created: 26 June 1992

Article Last Reviewed:

Article Last Updated:

TOPIC -----

PageMaker 4.0 is not working on my Macintosh Quadra with cache enabled.

DISCUSSION -----

Aldus reports that PageMaker 4.0 and 4.01 work on the Macintosh Quadra with cache enabled, if you are not using these filters, which are incompatible:

- Smart ASCII Import
- Smart ASCII Export
- Word 4.0 Import
- Story Importer
- RTF Imported

Aldus said that PageMaker 4.02 is 32-bit clean and fully compatible with the Macintosh Quadra with cache enabled. However, the Story Importer was renamed, so you must manually remove the older version or you may experience a crash with an Error 15.

To locate a vendor's address and phone numbers, search on the vendor's name.
