Macintosh 800,840av, 8100,8500: Internal SCSI Devices (11/95)

Article Created: 9 February 1993

Article Reviewed/Updated: 27 November 1995

TOPIC -----

How many internal SCSI devices can be installed in the Macintosh Quadra 800, 840av and Power Macintosh 8100 and 8500 series computers?

DISCUSSION -----

Because of space limitations, up to three internal SCSI devices can be placed into these computers. The primary variables are the type and capacity of drives you want.

- One 3.5-inch hard disk.
- One half-height 5.25-inch device such as an internal CD-ROM player.
- One full-height 3.5-inch device such as a removable cartridge drive, DAT drive, or another SCSI hard disk.

IMPORTANT: Modification of the internal components of your computer may void your warranty. Contact an Apple-authorized service provider for installation assistance.

Article Change History:

27 Nov 1995 - Added additional computers.
