Quadra 610, 660AV: Require 7-Inch NuBus Cards (12/93)

Article Created: 9 February 1993

Article Reviewed/Updated: 6 December 1993

TOPIC -----

The following explains the 7-inch NuBus requirement for the Macintosh Centris 610, 660AV and the Quadra 610 and 660AV.

DISCUSSION -----

While the NuBus standard does include a specification for a 7-inch NuBus card, many currently available NuBus cards do not work. Apple has worked with third parties to make sure that developers are aware of the specification and will be designing cards that fit. A variety of third-party video and networking cards do work. In addition, Apple's Ethernet NB card meets with 7-inch standard.

When using a NuBus card with the Quadra 610, 660AV or Centris 610, 660AV, make sure it consumes no more than 10 watts of power.

Article Change History:

06 Dec 1993 - Added the Quadra and Centris 660AV & reclassified.

02 Nov 1993 - Added Quadra 610

16 Nov 1993 - Deleted Quadra 605 (has no NuBus slot)
