Macintosh AV Systems: Powerkey Conflict (12/93)

Article Created: 20 October 1993

Article Reviewed/Updated: 7 December 1993

TOPIC -----

I have a Macintosh AV computer, and a PowerKey. I frequently get the message "Are you sure you want to shut down?" when selecting menu items. Zapping PRAM and booting with extensions off has no effect. The problem goes away when the PowerKey hardware is removed.

DISCUSSION -----

This is a problem with older versions of the PowerKey. Contact the vendor, Sophisticated Circuits, Inc., for a solution.

To locate a vendor's address and phone numbers, use the vendor's name as a search string.

Article Change History:

12/7/93 - Deleted specific reference to a new control panel, which is not the solution.
