Macintosh TV: Television Connection Tips (12/93)

Article Created: 1 December 1993

TOPIC -----

This article provides some tips for connecting a Macintosh TV to cable service.

DISCUSSION -----

- Basically, anything that can be attached to a regular TV can be attached to Macintosh TV. There are two ports for a video source: coaxial and RCA. Things that have an RCA plug can also be attached to the coaxial port with the proper adapter, and vice-versa. One restriction is that closed caption must come through the coaxial port.
- In the TV Setup control panel, click on Channel Setup and select Cable (as opposed to Antenna for broadcast TV) as the source.
