## Performa: Can't Use Apple Restore for External Drives (6/95)

Article Created: 24 March 1993

Article Reviewed/Updated: 8 June 1995

TOPIC -----

I want to place the Performa operating system onto external hard drives to allow booting Performa computers from the external drive.

It appears that Apple Restore looks for SCSI ID "0" as a destination for the restored software. This doesn't allow performing a restore to the external drive.

Is there any way to get Apple Restore to allow for restoring to external hard drives?

DISCUSSION -----

Apple Restore will only let you restore to the internal drive (SCSI=0). The only workaround would be to use a third-party backup program like Retrospect.

Apple Restore was written with novice users in mind to make it as easy as possible to use.
