Performa: Kensington System Saver (3/94)

Article Created: 21 July 1993

Article Reviewed/Updated: 7 March 1994

TOPIC -----

I recently replaced my Apple IIgs with a Macintosh Performa 405. On my IIgs I used a Kensington System Saver. Can I use the Kensington System Saver with the Performa?

DISCUSSION -----

Kensington doesn't recommend using this unit on a Macintosh Computer. The System Saver was designed to add a fan and surge protection to the Apple IIgs. The Performa 405, like all newer Apple Macintoshes, has a fan built-in and therefore requires no additional fan. You can purchase a surge protector from most hardware stores and have all the features the System Saver afforded.

Kensington also offered a System Saver for the compact Macintosh computers such as the 128, 512K, 512KE, SE, Plus, SE/30, Classic, Classic II and Performa 200. As with the System Saver for the Apple IIgs, this System Saver will not fit on the Performa 405 or LC platform.
