Performa: Using PageMaker 3.0 w/ Sys7.1 (7/93)

Article Created: 21 July 1993

TOPIC -----

I'm having problems with Page Maker 3.0 on my Performa 450. The spacing is wrong when I print even though it looks correct on screen. I'm using an ImageWriter II. When I switch to Claris Works, the spacing is OK. Is it a System 7.1p problem?

DISCUSSION -----

Aldus recommends using PageMaker 4.0 or later with System 7.1. Your version may simply be too old to be compatible. This may also be part or all of the problem.

You may also try choosing "Best" in the Print window. Choosing the "Draft" mode could be the root of the spacing problem.
