Macintosh: Vibration Tolerance (11/94)

Article Created: 30 August 1991

Article Reviewed/Updated: 10 November 1994

TOPIC -----

What are the limits of vibration tolerated by Macintosh computers?

DISCUSSION -----

The most sensitive components in a Macintosh system are:

- 1) the floppy disk drive, and
- 2) the hard drive.

Here are the vibration limits for floppy drives:

- Operating Limit: 5 Hz - 500 Hz at Max. .5 G
- Non-Operating Limit: 5 Hz - 500 Hz at Max. 2 G

For vibration limits of hard drives, perform a search on the hard drive itself. The specifications for the drive will state its vibration or shock limit.
