Macintosh AV & FusionRecorder: Red Dots with QuickTime (8/94)

Article Created: 11 August 1994

TOPIC -----

Why do I sometimes get red dots or pixels in the QuickTime movies I record using Fusion Recorder? This happens when I set the compression to "Video" at any quality and any frame rate.

DISCUSSION -----

It is possible to get distinct, bright, red dots in QuickTime movies that are recorded on an AV-series Macintosh. QuickTime movies should only get these red dots when the Caps Lock key is in the "down" position during FusionRecorder's compression process. Setting the Caps Lock key to the "up" position should keep the red dots from appearing.

This behavior has been fixed in QuickTime 2.0.
