Apple TV/FM Radio System: Description (7/96)

Article Created: 4 June 1996
Article Reviewed/Updated: 9 July 1996

TOPIC ---

This article contains a description of the Apple TV/FM Radio System.

DISCUSSION --

Overview
========

The Apple TV/FM Radio System brings the world of electronic media to your
Macintosh system.

Now you can stay current on late-breaking news, expand your horizons with
instructional shows, or enjoy entertainment programs—all while you continue to
work on your Macintosh. Your computer becomes an even more powerful
communications tool when you save audio or video clips for use in your business,
education, or personal multimedia projects.

The Apple TV/FM Radio System consists of a plug-in card with TV and FM radio
tuners, plus easy-to-use control software. Connectors on the back of the tuner
card let you attach cable TV or antenna feedlines. An FM antenna is included.

The TV control software combines the familiarity of standard television controls
with exciting new features. Enter your own channel descriptions, set program
alerts, and lock channels with password protection. Use closed captioning to
watch programs without disturbing others or to monitor newscasts while you're
listening to the radio. With a single click, shrink the TV window to one corner
of your screen to free up space on your Macintosh desktop, expand it to full
size for easy viewing from across the room, or set it to any size in between.

Switch to the FM radio application and enjoy music or talk shows. You can preset
any number of stations, and for even more convenience, there are six car
radio-style buttons with customizable labels for your favorite stations.

You can run the TV and FM radio applications at the same time to keep an eye on
a TV program while listening to music, or to listen to the radio commentary for
a TV sportscast. If you have two speakers built into or attached to your
Macintosh system, you can even listen to radio and TV programs in stereo.

There's also a remote-control unit that lets you change TV and radio stations, adjust the volume, and control the CD player in your Macintosh system.

The Apple TV/FM Radio System works with the Apple Video System to help you perform powerful multimedia tasks easily. Just click to capture and save still frames, video clips, or audio. Then simply paste the saved items into presentations, reports, and letters to make them really come alive. Audio and video can be played back with any application that supports Apple's QuickTime multimedia technology.

Features
========

Multimedia-rich

• Watch TV in a window or listen to the radio while you work
• Make your documents come alive with audio and video clips
• View up to 181 television channels
• Enjoy full FM broadcast band coverage

Easy to use

• Control programs look like familiar television and car-radio
  front panels
• Single-click startup for control programs
• One-button capture for images, video clips, and sound

Customizable

• Enter your own descriptions on radio buttons and TV lists
• Assign passwords to prevent children from accessing specific TV channels
• Set reminders for your favorite programs
• Resize the TV window to take up just as much or as little screen space
  as you want

Comprehensive

• TV and FM radio tuners
• Control software
• Handheld remote control (batteries included)
• Indoor antenna

Ordering Information
