### TOPIC -----

I would like to be able to display the image from a Macintosh SE/30 to a "Mitsubishi 37-inch monitor. Can this be done?

### DISCUSSION -----

For a Macintosh SE/30 to connect to this monitor, you need a video card and a video cable.

There are several color video cards that fit the Macintosh SE/30's processor direct slot. One of these cards will need to be installed. Among the cards available are RasterOps' ColorBoard 108+/SE30 & ColorBoard 264, Xceed Technologies' Xceed SE/306-48 & Xceed SE/3010-78 and Spark's Color Video Card.

Mitsubishi markets a cable that will connect between the card output connector and the monitor input connector. The cable is available from Mitsubishi's authorized retail outlets. For the name of an authorized dealer, contact one of Mitsubishi's distributors.

To locate a vendor's address and phone numbers, use the vendor name as a search string.
