System 7: DataDesk Keyboard Compatibility (11/94)

Article Created: 19 June 1991
Article Reviewed/Updated: 08 November 1994

TOPIC ---

This article gives compatibility information for DataDesk keyboards used with
System 7.

DISCUSSION --

Some older DataDesk Macintosh 101 keyboards do not allow you to disable
extensions under System 7 by holding down the Shift key during startup. There is
no known workaround for this problem, short of temporarily replacing the
DataDesk keyboard with an Apple keyboard.

Specific compatibility issues:

• Macintosh 101 Keyboard (Macintosh Plus) Version 1.0
  Incompatible INIT - Currently won't recognize any keys pressed during
  startup. Requires an upgrade to use extended part of the keyboard.

• Macintosh 101 keyboard (ADB) Version 1.0
  No INIT is needed - Won't recognize any keys pressed during startup.
  This keyboard is likely to be at least three years old.

• Macintosh 101 Keyboard (ADB or Macintosh Plus) Version 1.1
  Compatible with System 7.

• Macintosh 101e Keyboard (ADB or Macintosh Plus)
  Compatible with System 7.

• Macintosh Switchboard (ADB or Macintosh Plus)
  Compatible with System 7.

For further information, contact DataDesk. The address and phone number is in a
separate article in the Tech Info Library.
