LaserWriter II: Intelligent Controller Box

Article Created: 13 June 1991

TOPIC -----

Is there an intelligent controller box for a LaserWriter II that allows both AppleTalk and serial communications without resetting the printer?

DISCUSSION -----

BridgePort, from Extended Systems, allows input from RS-232, parallel, and LocalTalk sources. Unfortunately, BridgePort only outputs via parallel or RS-232. This works with a LaserWriter, but does not take advantage of the LocalTalk port. You can use it with non-Apple PostScript printers that don't have a LocalTalk interface.

To locate a vendor's address and phone numbers, use vendor name as a search string.
