TOPIC -----

I heard that Advanced Gravis Computer Technology Ltd. has an alternative input device for the Macintosh. Do you have any information on it?

DISCUSSION -----

This is an overview of the Gravis MouseStick from their developers' notes:

The Gravis MouseStick is a programmable optical joystick that is interpreted by the Macintosh as a mouse. It consists of a controller (joystick) and a dedicated processing unit (GMPU) with on-board logic and memory. This system allows special control configurations to be created and saved for customized response to stick handle movements and button presses.

For detailed information on this product, contact Advance Gravis Computer Technology Ltd.

To locate a vendor's address and phone numbers, search on the vendor's name.
