## Macintosh: Printing Incompatibility with Irwin Accelerator

Article Created: 4 December 1992

TOPIC -----

I can see my printer in the Chooser and can select it, but when I print, the system can't find the printer. I'm using a Macintosh SE with an Irwin Magnetics Accelerator 20/25.

DISCUSSION -----

Irwin Magnetics confirmed the card isn't compatible. The easy solution is to disable it from the control panel.

However, they did mention that one of their customers made some custom changes to their own control panel and released it as shareware that supposedly takes care of the problem. They said it could be downloaded from America Online or CompuServe.
