## At Ease 2.0 For Workgroups Save To Floppy (8/95)

Article Created: 9 November 1993

Article Reviewed/Updated: 9 August 1995

TOPIC -----

I'm using At Ease 2.0 for Workgroups at my school, and I want the students to ONLY be able to open and save from a floppy. I have set the control panel to require a floppy disk, but the students can still open and save files to the hard drive or floppy. Also there is no prompt to insert a floppy when creating a new document, or trying to open an existing one, what's wrong?

DISCUSSION -----

If you installed Norton's Directory Assistance II on your computer, what you describe can happen. It attempts to override the Finder and lets users open and save from other directories. Removal of Directory Assistance II or similar programs is necessary for At Ease to properly prohibit this from occurring.

Note: The same is true for other programs that access files without using standard file manager. They, too, will be able to view the disks contents without regard to At Ease security.
