Compatibility Checker & At Ease: Macintosh Won't Boot (8/95)

Article Created: 23 May 1994
Article Reviewed/Updated: 9 August 1995

TOPIC ---

I have At Ease on my Macintosh, and after running the Compatibility Checker for
System 7 Pro, my machine will no longer startup.

DISCUSSION --

At Ease is not compatible with System 7 Pro, and therefore the Compatibility
Checker will attempt to "move" At Ease out of the System Folder.

Compatibility Checker v7.1.1, which ships with System 7 Pro, attempts to move At
Ease 2.0 (Work Group version) from the System Folder of the active startup disk,
even if At Ease is turned on. It gives an error that there were problems moving
At Ease, but doesn't explain how to fix it, and doesn't remove ANY other items
from System Folder.

With At Ease 1.0, it DOES move At Ease Setup, along with all other incompatible
items. The result is that the Macintosh cannot start up again, because At Ease
is still the startup application designated in the boot blocks, but it is not
present after the Compatibility Checker has moved it.

If At Ease 1.0 was removed from the System folder while it was 'ON' then startup
with Disk Tools, drag Finder from within your System Folder (on your hard disk)
to the root level of the hard disk, then drag Finder back to System Folder. This
resets the boot blocks back to normal. The Macintosh should now startup to the
Finder, but At Ease will not be active. If you intend to run System 7 Pro, then
you cannot run At Ease.
