At Ease: CPU Energy Saver Cannot Shut Down From Panels (10/95)

Article Created: 12 October 1995

TOPIC -----

I set the CPU Energy saver on all the machines in my computer lab to shutdown if the machine has been idle for more than one hour. All the machines are running At Ease. The CPU Energy saver on all the machines starts counting down at the appropriate time but the machines do not shutdown.

DISCUSSION -----

The CPU Energy Saver can not shut the computer down when it is at the At Ease login screen or At Ease panels. It does the countdown and then the machine remains powered on. If you are in the Finder or Restricted Finder of At Ease, the computer will shutdown.

The Auto Power on/off control panel is able to shut down your computer even when you are in the At Ease panels.

Use the search string 'energy saver and ktable' to locate the TIL article "Energy Saving Control Panels: Description and Compatibility" to determine which energy saving control panels are right for your computer.
