## At Ease Updater (non-workgroups) 1.0 Read Me (6/96)

Article Created: 26 June 1996

TOPIC -----

The following article is the ReadMe document for the At Ease Updater (non-workgroups) 1.0.

DISCUSSION -----

This application is a utility that will modify the At Ease Startup system extension for At Ease 2.0 and 3.0, non-workgroup versions. Running this utility eliminates a potential startup hang problem with Mac-OS computers running Open Transport.

WARNING

-----

This utility should be used only on a non-workgroup version of At Ease, (called "At Ease" rather than "At Ease for Workgroups"). If it is used on versions 2.0 or 3.0 of At Ease for Workgroups, network access problems may result and you will need to re-install At Ease for Workgroups on the computer. (Running the utility does nothing on versions 3.0.1 or later of At Ease for Workgroups.)

To use this utility, run it on a computer that has an installed version of At Ease 2.0 or 3.0 (non-workgroups).

If the update is successful, you should restart your machine. This utility will append a "+" character to the version string of the At Ease Startup extension file once it has been updated. You can use the Get Info command of the Finder if you want to know if the file has already been updated.
