At Ease 4.0 Administrator Application & Restricted Finder (2/97)

Article Created: 19 February 1997

TOPIC ---

All of my At Ease 4.0 users work in the Restricted Finder environment, and I did
not add At Ease Administration to the list of allowed applications for the
workgroup. If a user navigates the hard disk to find and double click on At Ease
Administration, it will launch and request the password. If another application,
not on the allowed applications list, is launched, users get an access denied
message. Is this normal for At Ease Administration to not produce the access
denied message?

DISCUSSION ---

This is a feature of the At Ease Administrator application. The At Ease
Administrator is a special case in letting it launch from the Restricted Finder
environment. This is because the At Ease Administrator requires a password
before access is allowed.
