Macintosh II or Macintosh SE: MacDraw 1.9 Grey Page

This article last reviewed: 10 February 1988

PROBLEM: When opening MacDraw 1.9 on a Macintosh II or Macintosh SE using System 4.2, and Finder 6.0, the page comes out grey and the application does not allow any further use of the program.

CAUSE: Either there are no print drivers or the print drivers are damaged.

CURE: If there are no print drivers, install the desired print drivers on the system. If the print drivers exist but are possibly damaged, discard the current drivers and reinstall the new ones. The old print drivers **MUST** be thrown in the TRASH.
