MacDraw 1.9.5 & 1.9.6/LaserWriter 5.2 Conflict: Workaround

This article last reviewed: 23 May 1989

This article describes a workaround for the conflict between MacDraw versions (1.9.5 and 1.9.6) and LaserWriter 5.2: If you get a system bomb when printing from MacDraw, try this:

- Select All
- Group
- Print
- Ungroup

This seems to eliminate system bombs and keeps you from having to "downgrade" the LaserWriter drivers across the network.

(Be careful when you ungroup after printing--click on an object to deselect the selected objects, or you accidentally can move all the objects in your document.)
