ColorSync 2.0: Older Profiles Not Compatible (8/95)

Article Created: 11 April 1995
Article Reviewed/Updated: 24 August 1995

TOPIC ---

I just upgraded to ColorSync 2.0 on my Macintosh. My third-party monitor came
with a ColorSync Profile and has been working fine. After installing ColorSync
2.0, that profile does not seem to be working.

DISCUSSION --

ColorSync 1.x Profiles are not compatible with ColorSync 2.0. You need to get a
new profile from your display's manufacturer in order to use ColorSync 2.0.

You may be able to substitute one of the other Apple profiles until then. You
should first check with the manufacturer of your display.

Article Change History:
24 Aug 1995 - Revised to apply to third party displays only.
24 Apr 1995 - Added information on availability of new profiles.
