TOPIC ---

I have several instances of Oracle installed on my system. How does DAL
know which one to look at?

DISCUSSION --

The DAL Oracle database adapter, as supplied, is linked with the Oracle
Image Identifier "S". If your installation selected a different image
identifier, two assign statements must be supplied in either the system
login file or the user's login file to point DAL to the correct Oracle
images:

- Oracle 5.1.22

```
$assign/nolog device:[directory]ORACLEx.EXE ORACLES
$assign/nolog device:[directory]ORACRTLx.EXE ORACRTLS
```

  where "x" is the Oracle Image Identifier.

- Oracle 6.0

```
$assign/nolog device:[directory]ORACLEx.EXE ORACLES
$assign/nolog device:[directory]ORACRTLx.EXE ORA_CRTLS
```

  where "x" is the Oracle Image Identifier.
