DAL for MVS/VTAM: SNA•ps Over Token Ring

Article Created: 16 December 1991

Article Last Updated: 30 June 1992

TOPIC --

We run SNA•ps over a Token Ring connection to an MVS/VTAM host. We'd like
a DAL Server for MVS/VTAM to access through the Token Ring network with
LU6.2 protocols (APPC).

Will the Token Ring connection work for DAL access with SNA•ps to an
MVS/VTAM environment?

DISCUSSION --

DAL engineering lab is using this exact configuration, and it should work.
We recommend defining a larger RU size in the Mode Table Entry so you can
send a larger block size. You should be using SNA•ps version 1.0.1 or
later. See the member README in the DAL.RUN.JCL library on the installation
tape for additional information.
