TOPIC ---

What is the byte limit for the length of a variable-byte-length record in
DAL? Where can I get answers to similar questions?

RESPONSE --

There is no limit to the size of record support by the DAL server. VARCHAR
data types (as with a column of type VARCHAR) can be of any length.
However, DAL can't return to the DAL client a VARCHAR larger than 255
characters. Using the @substr function, you can return a very large
VARCHAR in several substrings.

This information isn't in the current manuals. For similar questions,
refer to the DAL Programmer's Reference, or the DAL Application Developer's
Guide.
