## DAL: Work With Microsoft Open EIS Pak (6/93)

Article Created: 10 June 1993

TOPIC -----

Is there information on Microsoft Open EIS Pak, and does it work with DAL?

DISCUSSION -----

Yes, Microsoft Open EIS Pak will work with DAL since it supports all Excel functions including Data Access Manager.

We found some information regarding Microsoft Open EIS Pak for the Macintosh in MacWeek Jan 11, 1993. This is a set of Excel-based development tools that aims to help users create corporate information systems based on an Excel spreadsheet, without writing code.

The package includes a variety of tools for creating custom menus, user-prompt dialogs, navigation controls and links to other applications. This package is nearly identical to the Windows version released last November 1992.

Microsoft Open EIS Pak for the Macintosh requires Excel. It will support all Excel functions, including charting and graphing, as well as System 7 features such as publish and subscribe, Apple events, and the Data Access Manager.
