DAL/VMS 1.4-Invalid Username/Psswd Error, ADSP Connect (12/93)

Article Created: 13 December 1993

TOPIC -----

I'm having a problem with DAL for VMS 1.4. Whenever I try to connect I get an error message which indicates an invalid username or password. I was able to use MacTerminal and the c-term tool to connect to the VAX. I used the same userid and password and was able to log on to the system. What am I missing?

DISCUSSION -----

If you confirm that your username and password are good, one cause of this error message is the "Restricted" flag being set on the UAF record. When you consult the VAX/VMS documentation, it is vague and does not present the flag as a problem. By unsetting this flag, this problem often goes away. Copyright 1993-94, Apple Computer, Inc.
