System 7: Adobe Type Manager 2.0 and 32-bit Addressing

Article Created: 19 June 1991

Article Last Reviewed: 13 July 1992

Article Last Updated: 13 July 1992

TOPIC -----

I'm using Adobe Type Manager 2.0 and 32-bit addressing under System 7. The system crashes whenever I select a font menu. What is the workaround?

DISCUSSION -----

The workaround is to disable 32-bit addressing. Adobe Type Manager 2.0 is compatible with 24-bit addressing, but incompatible with 32-bit addressing under System 7. Upgrade to a more recent version of ATM (at least 2.03), for 32-bit addressing to work properly.
