Protect Applications Folder Error Messages (8/96)

```
Article Created: 21 August 1996

TOPIC -----------------------------------------------------------

With the Protect Applications folder option selected in the General Controls
control panel, two different error messages appear depending on what I try to
remove from the Applications folder:

• If I try to move a folder from the Application folder to the startup drive
icon, I get "You cannot move 'folder name' to the disk 'disk name', because it
is locked."

• If I move a file, I get the correct message indicating that folder protection
is turned on.

DISCUSSION ------------------------------------------------------

This is an issue with file protection and should be addressed in a future
release of system software. Both error messages indicate that folder protection
is on.
