HyperCard: Protect Stack option

Article Created: 1 September 1987
Article Last Reviewed: 10 July 1992
Article Last Updated: 10 July 1992

HyperCard's Protect Stack feature protects stacks from modification or access. Protect Stack appears in the File menu when your User Preference is set to Painting or higher, and gives a number of options for what level of protection you want.

Beware: if you select Private Access in the dialog box, embed a password in the stack, and then forget the password, you won't be able to decipher the password from HyperCard.
