HyperCard: Fix for DateBook Stack

This article last reviewed: 17 February 1990

TOPIC ---

I found a problem in HyperCard's DateBook stack. The DateBook stack updates
itself from January to June with the new dates for 1990. Then, when I click on
the first week of January, it asks if I want to update the weekly calendar, and
I answered yes. After finishing this, I went to the Home card and clicked on
the Calendar icon again and then on the first week. At this point, nothing
happened. If I click on week 2, it works perfectly, and I get the weekly
calendar for the second week. Can you explain?

DISCUSSION --

There are the two minor changes you need to make to avoid this problem, part of
which has to do with backgrounds. Note to long-term users: This problem will
occur again in 2001 and 2018 and every 11 and 16 years afterward:

In the DateBook's stack script, change the "goweekly" handler from this:

```
    set lockScreen to true
    find startOfWeek(myDate) in bkgnd field "WeekSecs"
```

To this:

```
    set lockScreen to true
    go bg "Weekly"
    find startOfWeek(myDate) in bkgnd field "WeekSecs"
```

Also, in the stack script, change the GoSixMonthly handler from this:

```
    visual effect zoom open
    find thisHalfYear(myDate) in bkgnd field "MySecs"
```

To this:

```
    visual effect zoom open
    go bg 1
    find thisHalfYear(myDate) in bkgnd field "MySecs"
```

These changes will solve both the problem of not going anywhere when you click

on the first week in January and the "can't understand bracketweek" message.
