HyperCard: Error Code 19374

This article last reviewed: 24 April 1989

Error 19374 means that HyperCard was not able to dispose of all of the objects in memory. This probably means that your stack is corrupted.

To solve this problem, create a new stack and transfer all of the scripts, data, and so on from the old stack to the new stack. If the stack is large, you may want to create a script to automate this process.
