## HyperCard: Error 1277

This article last reviewed: 20 October 1989

TOPIC -----

I keep getting HyperCard error 1277 when I try to add a new card, even though there is enough hard disk space to add a new card. What could the problem be? Is there a list of HyperCard error codes where I could look this up?

DISCUSSION -----

Error 1277 generally occurs when HyperCard tries to allocate space for an additional object and can't. It's usually the result of a corrupted stack. Our only suggestion is to use the recovery utility available on AppleLink.

Error codes in HyperCard are not available in list form because the codes are considered confidential.
