HyperCard: Palette Design Shortcut (7/92)

Article Created: 30 July 1991

Article Reviewed/Updated: 23 July 1992

TOPIC -----

When using the Palette Maker in the Power Tools stack, you have to create a card graphic for the appearance of the palette. The intuitive way to control the appearance of a new palette is by selection of button styles and icons, but Palette Maker ignores them.

DISCUSSION -----

You can convert an arrangement of buttons into a graphic for use by the Palette Maker. Choose the select tool, drag a box around the buttons, choose Export Paint from the File menu, and park the exported file any place handy. Then Import Paint the same file. This creates a graphic which is an image of the originally selected area, including buttons, fields, and previously existing graphics (card and background).
