HyperCard: Handler for Writing Scripts (7/92)

Article Created: 11 January 1991

Article Reviewed/Updated: 23 July 1992

TOPIC -----

This function takes a script as a parameter and returns a script that can reproduce the original script. It's useful for encoding scripts into other scripts.

DISCUSSION -----

```
function writeScript sourceScript,varName

if varName is empty then put "scriptVar" into varName
  put quoteLines(sourceScript) into resultScript
  repeat with i = 1 to the number of lines in resultScript
    put "put " before line i of resultScript
    put " after " & varName after line i of resultScript
  end repeat
  put "put empty into " & varName & return before resultScript
  return resultScript
end writeScript
```
