HyperCard: How to Open a Stack That Closes Itself

This article last reviewed: 22 January 1988

If you find that you've accidentally created a HyperCard stack that closes
itself immediately upon opening -- and you can't edit it to correct the
problem, here's a way to force it to stay open.

In your home stack, make a button with this script:

```
        on mouseUp
          set lockmessages to true
          go to stack "xyz"
        end mouseUp
```

where "xyz" is the name of the problem stack. This will open the stack and
leave you at the first card.
