HyperCard: Sending HyperTalk in AppleScript (12/93)

Article Created: 2 December 1993

TOPIC ---

How do I embed HyperTalk code in a script that is in the AppleScript
environment?

DISCUSSION --

After setting the language environment to AppleScript:

• Use the command "do script" and enclose the HyperTalk code in quotes.
  For example:

    do script "send mouseUp to card button 5"

• Or put AppleScript code in a field, then use something like this:

    do card field scriptText as AppleScript

  If the field scriptText has AppleScript code in it, the HyperTalk command
  will execute it as AppleScript.
